

Before+Aftercare Instructions

Pre-tan preparation

For best results, you should ideally shower and exfoliate, paying special attention to elbows, knees and heels the day prior to your spray tan. On the day of your spray tan shower as normal and apply no products such as moisturisers, deodorant, makeup, or perfumes as these will change the pH of your skin and prevent even absorption. Hair removal is best performed 24 hours prior to getting spray tanned.

What to wear

This is a personal choice, most people prefer an all over tan and wear nothing, although bathers or a G-string can also be worn during the spray tan – you decide. After your spray tan ensure that you wear loose clothing (no bras).

Maintenance

Moisturise daily to prolong your tan, avoid long baths and chlorinated pools. Shower using Sodium Lauryl Sulphate free products. Sodium Lauryl Sulphate is a harsh foaming agent that strips the skin of its natural oils, which will have an adverse effect on the longevity of your spray tan.
